To the Stripe Hiring Team,

I'm writing to express my strong interest in the Product Strategy & Operations role for Link. What draws me to this opportunity is the unique challenge of scaling a consumer wallet in a space where winning depends not just on product quality, but on execution across numerous facets; getting commercialization, segmentation, and pricing exactly right across a massive and diverse user base. I've spent my career doing exactly that — leading cross-functional pricing and go-to-market strategy and then building the operational infrastructure to execute it. I'd love the chance to bring that experience to the Link team.

The mandate to design and execute continuous pricing strategy and drive cross-functional user launches resonates deeply with my recent work. At M Science, I led the cross-functional effort to redesign our packaging and pricing model from the ground up. Through product discovery and direct engagement with customers, I identified a critical gap: disparate product definitions were creating siloed work across teams and stalling enterprise deals. I partnered with Data Science, Sales, and Investment Research to build a data-driven pricing framework and establish a pricing desk, while collaborating with sales and marketing leadership to craft the go-to-market strategy around it. This strategic overhaul directly resulted in a ~35% increase in ARR in the first quarter and an exponential increase in new business deals. I see a clear parallel to the work Link needs — translating complex product dynamics and user insights into segmentation, positioning, and pricing models that accelerate adoption and revenue growth.

I also understand that driving rapid growth requires more than strategy — it demands a willingness to operate at the lowest level of detail and build the systems that make execution repeatable. To that end, I conceptualized and built an internal Salesforce product to serve as the master data system for all product metadata, automating entitlements and enabling product-level unit economics and analytics at scale. My technical proficiency in SQL and Python makes me self-sufficient in building the data-driven analyses this role requires, whether that's tracking the success of user launches, identifying trends in adoption, or surfacing insights that help cross-functional partners make better decisions.

I'm excited by the opportunity to help Link refine its commercialization engine at a moment when the consumer payments landscape is evolving rapidly. I would welcome the chance to discuss how my experience can contribute to the team's growth.

Thank you for your consideration.

Sincerely,

Siddharth Bhaskaran
