To the DoorDash Hiring Team,

I recently came across the posting for the Strategy & Operations Associate Manager, Payments Risk role, and I am certain that my background using data to solve big strategic hurdles and collaboratively building complex technical solutions makes me a perfect fit for your team. I have built my career on turning data into insight and architecting robust systems, leveraging a blend of technical data skills and strategic cross-functional leadership.

The role involves establishing the strategic approach to payments risk, a challenge that requires rigorous judgment and data fluency to protect the platform. At M Science, I demonstrated these skills by leading a cross-functional overhaul of our pricing and packaging models. I coordinated Sales, Data Science, and Research teams to build a model that aligned our internal incentives with market demand. The result was a new pricing process that drove a 35% revenue increase, while simultaneously minimizing churn risk.

Furthermore, I have extensive experience building infrastructure to support proactive risk management. As part of an initiative to create a more comprehensive analytics offering at M Science, I led the development of an ML-based client health indicator to identify churn risk. This required me to lead the technical scoping while collaborating closely with our Engineering and Data Science teams to operationalize the model.

My technical proficiency also allows me to be self-sufficient in analyzing user behavior and data integrity. At YipitData, I designed complex ETL pipelines and ingested data from REST APIs to create source tables for analysis in Databricks. This initiative ensured leadership had accurate data to identify anomalies and cut our reporting delay rate in half. Moreover, during my tenure at PennyMac, I became exceptionally proficient at managing complex Excel models, developing high-visibility tools for executive stakeholders. I also managed complex SQL queries and stored procedures to support critical analysis.

I excel at influencing without authority and solving ambiguous problems with data. I am eager to bring my uniquely suited skillset as a candidate who is both deeply technical and strategically minded to help solve the Payments Risk team's most complex problems.

Sincerely,

Siddharth Bhaskaran
