To the Mochi hiring team:

I recently came across your posting for the Operations Manager role, and in short, I think I would be a perfect fit; as an analytical and strategically-minded professional with extensive experience solving strategic and operational problems with data, I believe I have the experience and skills needed for the role.

In my most recent role at M Science, I leveraged quantitative data in conjunction with cross-functional collaboration to develop solutions to the organization's most difficult scalability problems. For instance, I steered a major cross-functional initiative to overhaul our packaging and pricing structure. By aligning the incentives of data science, sales, and research teams to build a more robust, data-driven model, we successfully drove a 35% revenue increase in the quarter immediately following the launch. Beyond strategy, I focused on infrastructure; I architected a master data system within Salesforce to automate product entitlements and unify our metadata, effectively building the scalable "semantic layer" needed to support our product analytics and unit economics.

I am also confident that I have the technical skills necessary to make a major impact at Mochi Health. At YipitData, I engineered the backbone of our internal reporting by designing complex ETL pipelines and validating data integrity across REST APIs and SQL sources. I also diagnosed bottlenecks in our report publishing workflow and implemented a new operational framework that cut our delay rate in half, giving significant time back to our analysts to focus on high-leverage work. Earlier in my career at PennyMac, I served as the primary data owner for the Broker Direct channel, where I developed the high-visibility reporting infrastructure used by leadership to guide strategy for a massive loan portfolio.

I am confident that I can make an impact at Mochi Health; I excel at solving difficult problems with data, and am skilled at picking up new tools and skills as needed by the project, having become proficient in using Databricks Unity Catalog, Salesforce, Tableau, and Advanced SQL and Python among others over the course of my career. I look forward to potentially doing so at Mochi Health soon.

Sincerely,

Siddharth Bhaskaran
