To the Tailscale Hiring Team,

I recently came across the posting for the Business Operations/Strategy role. I am certain that my background in solving big strategic hurdles and collaboratively building technical solutions makes me a perfect fit for your team. I have built my career on taking "0 to 1" initiatives from concept to execution, leveraging a blend of technical data skills and strategic cross-functional leadership.

The role involves evaluating and reshaping pricing and packaging strategy—a complex challenge that requires rigorous data analysis and operational execution. At M Science, I demonstrated this exact capability by leading a cross-functional overhaul of our pricing and packaging models. I coordinated Sales, Data Science, and Research teams to build a data-driven model that aligned our internal incentives with market demand. The result was a new deal approval process and monetization strategy that drove a 35% revenue increase.

I understand that scaling a high-growth startup requires establishing robust infrastructure to "reduce duplication" in business systems. I have a proven track record of rolling up my sleeves to build the backend systems necessary for such a process. For example, I architected a master data system within Salesforce to unify our metadata and automate entitlements. This effectively built the scalable "semantic layer" needed for our product analytics and served as the backbone for our customer portal and internal reporting. I enjoy building these structures early so they can be handed off as the company scales.

Additionally, my technical proficiency allows me to be self-sufficient in analyzing business health and operational efficiency. At YipitData, I designed complex ETL pipelines ingesting data from REST APIs and various other sources to create standardized source-of-truth tables. This initiative not only ensured leadership had accurate data, but also helped me directly impact strategic decision making around our internal process, which, among other things, cut our reporting delay rate in half.

I excel at influencing without authority and solving ambiguous problems with data. I am eager to bring my uniquely suited skillset as a "Swiss Army Knife" candidate to help Tailscale anticipate challenges and scale efficiently.

Sincerely,

Siddharth Bhaskaran
